

**LINGUISTIC VALIDATION CERTIFICATE
PAPER VERSION OF THE *CLINICAL DEMENTIA RATING WORKSHEET (CDR)***

This is to certify that MAPI Institute conducted the linguistic validation of the paper version of the **Clinical Dementia Rating (CDR)** into the languages listed on the following pages.

The aim of a linguistic validation is to obtain translations that are:

- conceptually equivalent to the original and comparable across languages;
- culturally relevant to the context of the target country;
- easily understood by the people to whom the translated instrument is administered.

This is achieved using a rigorous methodology¹ involving:

- a process which comprises several steps (see diagram on the last page of this document);
- the collaboration of the instrument's developer and a skilled team recruited by MAPI Institute in the target country which is headed by a consultant with knowledge of and experience in the field of Patient-Reported Outcomes;
- a centralized review process coordinated by MAPI Institute.

The specific methodology used to produce these versions of the **CDR** is summarized in the table on the following pages. For each language, the linguistic validation process was coordinated and supervised by a consultant in the target country under the guidance of MAPI Institute who performed a quality control and discussed the translation decisions with the consultant at each step of the process.

The linguistic validation process

* For some languages that are close to one another (e.g. British and American English; French for France and Belgium), the complete standard linguistic validation process outlined above with *forward* and *backward* translation steps may not be appropriate. For such cases, an **adjusted** linguistic validation process has been established. The *forward* and *backward* translation steps are replaced by a review and adaptation step, where the work is based on a version considered as the "mother language" version. The subsequent steps are identical to those used in the standard linguistic validation process.
